- Hard Drive: Free Space 2 GB+
- IEEE 1394 Port (Firewire)
- DV Camera
- Firewire Cable
- CD-ROM Drive
- Call for Dual- and Multi-Camera Specifications

G.A. VASP
VIDEO ANALYSIS
SOFTWARE

TECHNOLOGY

G.A. VASP is a high-end Digital Video (DV) golf analysis software program that integrates seamlessly with both the GA II and GA Sim, combining the statistics of launch monitor technology with the images of Digital Video Analysis. This combination not only allows professionals and students to “see” the swing, which is where traditional video analysis programs end, but also evaluate the swing based on statistics. Along with standard playback controls and drawing features as found in G.A. VAS, G.A. VASP also offers the following features: the ability to create internet lessons, student CDs, student database files, simultaneous capture of up to 6 Camera Angles of the same swing, compare up to 8 swings on the same screen, club tracking, image strobe, and more advanced drawing tools. The features and functionality of G.A. VASP make it the finest and easiest to use Digital Video golf analysis software available.

FEATURES & BENEFITS

- > Internet Lessons Created in a Single Step
- > Send Internet Lessons direct to Student – NO PORTAL concept, and NO Additional FEES
